

VIBRANT™

ACOUSTIC WALL & CEILING PANELS
IN PAINTED OR HPL FINISHES

"Remember, colour is not just colour, but mood, temperature and structure."¹

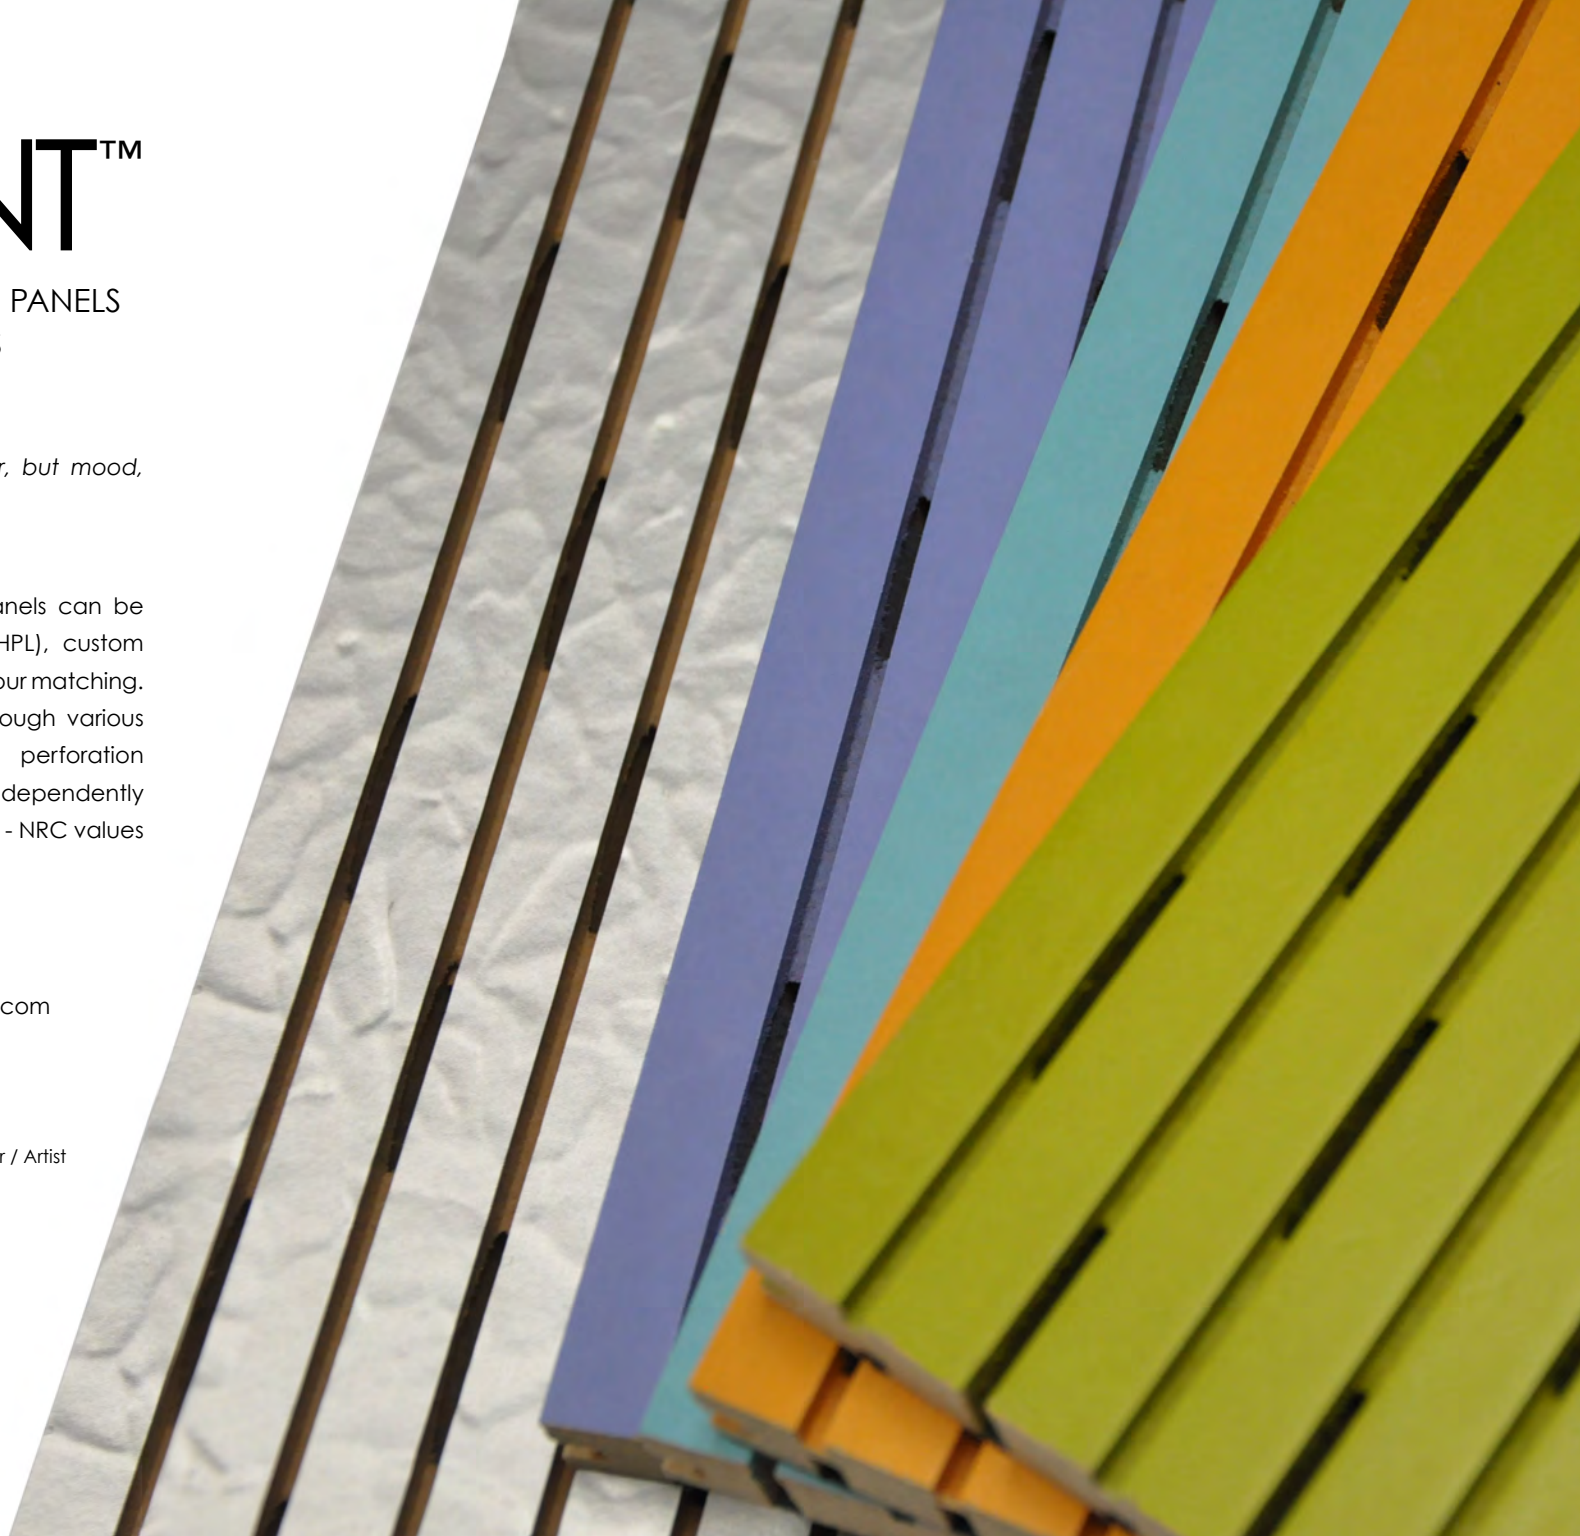

eomac's wide range of acoustic panels can be finished in high pressure laminate (HPL), custom staining and PANTONE, RAL or NCS colour matching. The panels absorb sound energy through various standard and custom groove or perforation patterns. Each panel type has been independently tested to verify acoustic performance - NRC values as high as 0.95.
